

China--the world's leading solar PV market by volume and production--will see its inverter sector contract by 5% in 2025 to 304GW, a greater contraction than the global average. This ...

Utility-scale inverter pricing faces the steepest declines, with Chinese domestic three-phase string inverters expected to fall below US\$0.02/watts AC (Wac) and central standalone ...

China's solar inverter market is projected to decline in 2025, a first since 2019.

China, as the largest solar PV market worldwide, is expected to see a 5% contraction in inverter shipments in 2025, reaching 304GW. This decline reflects a market shift aimed at addressing ...

Wood Mackenzie says the downturn follows record shipments in 2024 and reflects market uncertainty across China, Europe and the United States. China's solar inverter market is set to...

Along with China's projected increase in domestic solar energy use in the near future, there is a raising concern about the political issues affecting the supply of crucial resources.

"Following this current downturn, we do expect the solar inverter market to recover and even surpass the 2024 market size by the early 2030s," Shangraw said.

This article will discuss current state of China's PV inverter industry, including industrial chain structure, policy support, market size, export situation, and future development trends.

**Introduction** The China residential solar inverter market has emerged as a pivotal segment in the nation's renewable energy transition.

The increasing demand for renewable energy sources in China is a pivotal driver for the solar inverter market. As the nation aims to reduce its carbon footprint, the transition towards solar energy has ...
