

Cuba's hybrid energy generation plan for communication base stations

The problem stems from years of neglect of Cuba's energy infrastructure, exacerbated by constrained access to foreign capital and a failure ...

Many Cubans fall back on bottled gas or wood fires when power is cut, while internet and communication services weaken further during outages. ...

Cuba's government says it has begun investing in a long-term plan to produce a growing percentage of its electricity from renewable sources, ...

In an interview, Minister of Energy and Mines Vicente de la O Levy detailed a comprehensive strategy that combines short-term projects with a long ...

The substitution of liquefied natural gas (LNG) for the highly polluting oil with a high sulfur content, as a fuel in base-load electric generation, has a ...

On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges.

This section describes the four key components to Cuba's electricity sector: (1) fuel sources, including fossil fuels and renewable energy resources; (2) existing centralized generation; (3) transmission, ...

Cuba does not produce or have reserves of coal; following a period of high coal consumption during the early 1990s, modern day Cuba imports tiny amounts of coal per year, and it does not constitute an ...

Despite Cuba's enormous solar energy potential, the best option is to use combined solar and wind energy. However, in the absence of energy storage, solar and wind resources cannot fully ...

In this briefing, energy industry expert Jorge R. Piñero documents the multiple challenges faced by Cuba's National Electric System (SEN), including an obsolete and collapsing infrastructure, as well ...
