

Data logger for solar power plant

What is logR | solar?

Leveraging decades of data logger design and manufacturing experience, LOGR | Solar features the same user-friendliness that has come to define NRG's data logger line, optimized for today's demanding solar applications. This advanced data logger provides the features you need to deliver premium performance at an optimal price point.

What is a solar PV data logger?

More pricing options, more brands, see it all in one place. This network management instrument serves network operators to protect the network from over- and underloading. A solar pv data logger collects data from various resources and transmits them to a portal which processes and visualises data.

How does our solar datalogger work?

ePowerLog Compact is a universal datalogger designed for solar energy systems with capacities under 500 KWp. Remote access & exportation of data: By using ePowerMonitor, or any other compatible third-party monitoring platforms.

Where can I access epowerlog data?

ePowerLog is suited for the monitoring of solar energy systems integrating PV plants, grid, diesel generators and/or battery storage systems. Where can I access the data? Locally, over USB, and Modbus gateway (to connect to 3rd party Modbus master).

A universal data logging and monitoring device for solar energy systems that seamlessly integrates PV plants, diesel generators, and battery storage.

KSolare offers top-tier data loggers and remote monitoring systems for solar PV plants. Trust us for all major brands in rooftop and ground mount applications.

Smart technologies designed for wind/solar resource assessment, optimization, and monitoring as well as atmospheric solutions: towers, met sensors, data loggers, Lidar, and turbine control sensors.

The Data Logger can record several thousand data channels with a resolution of up to one second. With functions like voltage regulation, reactive or active power control, and control of power factor at the ...

A solar system in the order of 10 MW is composed of some 1000 strings for every 30 solar panels. The photovoltaic system consists of a variety of string combiner boxes, inverters, and additional ...

Logger4000 is the energy management solution for users to monitor and manage the PV power plant so as to make sure the healthy condition of the plant.

A solar data logger/data logger for solar, also known as a data recorder or data acquisition system, is an electronic device used to collect, store, and record data from various sensors or instruments over ...

Data logger for solar power plant

A solar pv data logger collects data from various resources and transmits them to a portal which processes and visualises data. We take the term data collection more broadly, and understand it as ...

S3-Logger commercial datalogger is designed for C& I PV plants. It is able to collect data from 4 RS485 ports simultaneously and bring in data from Solis Inverters, Solis meters, 3rd party irradiance ...

When it comes to maximizing your solar energy efficiency, choosing the right performance data logger is essential. With numerous options available, it can be challenging to find ...
