

Difference between horticulture and botany

What is the difference between horticulture and botany?

While horticulture focuses on the cultivation, propagation, and management of plants for practical purposes such as food, medicine, and aesthetics, botany is the scientific study of plants, including their structure, growth, reproduction, evolution, and ecology.

What is the difference between Plant Science and horticulture?

Botany, also called plant science (s), plant biology or phytology, is the science of plant life and a branch of biology. A botanist, plant scientist or phytologist is a scientist who specialises in this field. Horticulture is the art of cultivating plants in gardens to produce food and medicinal ingredients, or for comfort and ornamental purposes.

What is the difference between horticulturist and botanist?

Includes the cultivation of fruits, vegetables, flowers, and ornamental plants. Includes the study of plant structure, function, reproduction, and classification. Horticulturists are more concerned with the practical aspects of growing plants, while botanists are more concerned with the scientific study of plants. History of Horticulture and Botany
