What are the key trends in Africa's energy consumption in 2024?

This report highlights key trends from the updated African Energy Information System (AEIS). In 2024, biofuels and wastes continue to dominate energy consumption in Africa, accounting for 54.41% of total final energy consumption.

What is total energy consumption?

We previously looked at total energy consumption. This is the sum of energy used for electricity, transport, and heating. Although the terms "electricity" and "energy" are often used interchangeably, it's important to understand that electricity is just one component of total energy consumption.

What is primary energy consumption?

This interactive chart shows primary energy consumption country-by-country. It is the sum of total energy consumption, including electricity, transport, and heating. We look at electricity consumption individually later in this article.

How do countries compare energy consumption?

When we look at total energy consumption, differences across countries often reflect differences in population size: countries with lots of people inevitably consume more energy than tiny countries. How do countries compare when we look at energy consumption per person? This interactive chart shows per capita energy consumption.
