

How to install the top solar panels

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted, and installing the solar panels is not difficult. What is more difficult is wiring them.

How do you install a solar racking system?

Installers add landscaping pavers or concrete blocks to the bottom of the system's frame to hold the frame and top solar panels in place. You can adjust the panels on this racking system between 5 and 30 degrees, depending on the type of panel and the manufacturer. You also have the option to install a dual-orientation (east and west) system.

How do you activate a solar system after installation?

After solar panel installation, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, note that as long as the solar panels are receiving sunlight, they have an open circuit voltage. Be careful when handling them.

How do you install solar panels on a flat roof?

For Flat Roofs - Installers use either ballasts or concrete blocks to rack the solar panels. Once you secure the structures into place properly, you can move on to installing the racking rails. When installation day begins, start with ensuring the solar racking system conforms to your design and drawing. 2. Mounting the Solar Panels
