

Is it good to install solar power on the house

Should you install solar panels at your home?

When you install solar panels at your home, you generate your own electricity--which means you become less reliant on your electric utility company and reduce your monthly electric bill. A solar panel system typically has a 25- to 30-year lifespan, so you can cut your electricity costs for decades by going solar.

Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Should you invest in a solar power system for your home?

If you are thinking of moving toward green energy by investing in a solar power system for your home, consider several factors first. These include the suitability of your house, the kinds of incentives and rebates that may be available to you to keep costs down, and what you'll need to do after the installation is complete.

Do solar panels add value to your home?

According to the US Department of Energy's Lawrence Berkeley National Laboratory, solar panels can add serious value to your home and sell quicker than homes without solar. A recent study found that, based on the average home cost, homes with solar sell for 6.8% more, adding a value of around \$25,000. Solar panels can add to your home's value.

While there is not a universal solar energy solution, in this guide you will find some resources that can help you decide what's best for you. Consider these questions before you go ...
