The city's wind and solar energy storage power station has become a blueprint for sustainable energy solutions in Central America. But how does it work, and why should you care?

Rising 450 feet above the California Desert, Ivanpah is the world's largest concentrating solar power facility.

The Moss Landing Power Plant site has since been chosen as California's primary location to provide battery based energy storage in order to better utilize renewable energy sources such as solar and ...

The Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across the state line from Primm, Nevada.

DGStats will soon grow to include different types of renewable energy generation. "Behind-the-meter" facilities" energy generation can be used directly by the customer, with any remainder being sent to ...

Nicaragua is making waves in renewable energy with the Managua Energy Storage Station, a cutting-edge facility designed to stabilize the national grid and support solar and wind power integration.

Now, with its closure slated for early 2026, the solar world reflects on what Ivanpah achieved -- and what its legacy might mean for the future of large-scale solar projects.

Created through the joint effort of NRG, Google, and BrightSource Energy, Ivanpah produces enough clean, renewable electricity to power 140,000 homes. At the time, Ivanpah nearly ...

Enter a state, county, city, or zip code to see a solar estimate for the area, based on the amount of usable sunlight and roof space.

Pacific Gas & Electric said in a statement it had agreed with owners -- including NRG Energy Inc. -- to terminate its contracts with the Ivanpah plant. If approved by regulators, the deal would lead to ...
