

# Self-installed solar generator

How to build a solar generator?

To build your solar generator you'll need a few basic tools that include: First, you need to test the panel and the charge controller. Plug the two pigtail cords coming from the panel in the appropriate (+) and (-) sockets on the charge controller. Now, hook the controller to the battery.

What is a DIY solar generator?

A DIY solar generator is a self-contained and portable mini-power plant that can allow you to be 100% independent from the grid. Let's look into a few reasons why you should build a DIY solar generator for camping or off-grid living. With zero emissions, solar generators are far more environmentally acceptable than those running on fossil fuels.

How much does a DIY solar generator cost?

So let's talk about what the main components may set you back. Building a DIY solar generator may cost you anywhere between \$1,600 and \$2,400. The main variable is the battery type. If you're on a budget, by all means, go with a good-old lead-acid battery. Finally, before you start, make sure to create a DIY solar generator wiring diagram.

Should you build a solar generator from scratch?

A DIY generator costs much less than a factory-made one, not to mention that you can custom-choose many parts. The whole point of building a solar generator from scratch is staying self-sufficient and proving to yourself that you can use your skills and brains to become independent from the grid.

Discover how to build a DIY solar generator with essential components and step-by-step guidance. Get off-grid power for backup, camping, and more.
