

Solar energy charging head

It's a sun hat with edges lined with solar panels. If the conditions are right, it can create solar energy that can be used to charge a mobile device, such as an iPhone.

The EcoFlow Power Hat is more than just a fashion statement - it's a practical and sustainable way to harness solar energy and keep your devices charged on the go.

The concept is clever: eight solar panels built into the hat feed power to two USB ports (one USB-A, one USB-C) housed in a small box beneath the back rim, complete with a tiny LED ...

EcoFlow Power Hat: Lightweight, foldable cap with built-in solar panels for on-the-go device charging. Water and dustproof, charges phones in 3-4 hours.

This is solar charging on the go in a stylish, wearable, and functional design. As opposed to traditional solar panels, the hat captures solar energy from all angles sans any blind spots from its 360-degree ...

It automatically adjusts charging in real time, maximizing the use of solar power and reducing your reliance on grid electricity, without requiring manual intervention.

It can charge your devices over either of the dual USB-A or USB-C ports embedded in the hat. You can even plug in two devices at once to charge them both simultaneously. For a limited ...

The flexible solar panel captures sunlight as you go about your day, and the energy flows through to the USB-C port inside the hat's band. You plug in, stash your device in a backpack or ...

Beyond its function as a hat, the Power Hat can also be used as a portable solar charger. Simply unfold the hat and place it in direct sunlight to harness solar energy anywhere.

This solar accessory stands out for its versatility and usefulness compared to other similar options on the market today. It can charge a phone battery in just three hours, and you can ...
