

What is Latvia's Energy Strategy 2050?

Latvia's Energy Strategy 2050 outlines major changes in renewable energy production and storage, with significant investments planned in wind, solar, biomass, and biogas, as well as in energy storage technologies like batteries and subsurface systems to ensure supply stability.

When will battery energy storage systems be installed in Latvia?

The most recent update regarding BESS installations is that in Tume and Rzekne, Latvia's transmission system operator "Augstsprieguma tīkli" (AST) in June 2025 installed battery energy storage systems with a combined capacity of 80 MW and 160 MWh, which will undergo testing until October 2025.

Is Latvia ready for a green energy transition?

Solar and wind energy production alone experienced an impressive 92% surge in 2023 compared to 2022, and this momentum shows no signs of slowing down. Building on these achievements, Latvia has set ambitious targets for its green energy transition.

What is the main source of renewable electricity in Latvia?

Hydroelectric power is the main source of renewable electricity in Latvia, followed by solar, wind and biomass cogeneration plants. In 2024, solar power in Latvia grew over 3.1 times to 6.7% of total electricity, becoming the third-largest source, while wind reached a record 38 GWh and hydropower, despite a 16% drop, still provided 54%.

Using Monte Carlo simulations and stochastic modeling, the research incorporates key economic parameters such as CAPEX, OPEX, and discount rates to assess future LCOE trends.

In recent years, there was a growing interest in the installation of photovoltaic microgenerators in Latvia. By June 2023, the total number of households microgenerators connected ...

Solar and wind energy production alone experienced an impressive 92% surge in 2023 compared to 2022, and this momentum shows no signs of slowing down. Building on these achievements, Latvia ...

Solar photovoltaic (PV) electricity holds significant potential as a clean and cost-effective energy source. However, its contribution to overall electricity production remains limited primarily due ...

Elevated timber-frame cabins, constructed with photovoltaic glass and designed to minimize environmental impact, provide a sustainable retreat for nature enthusiasts along Latvia's picturesque ...

Ready-made houses can be seen at our production in Rezekne, for this you need to agree on the viewing time in advance. You can also see the houses in Saulkrasti, in the villages "Priekalni" and ...

The developed guidelines promote a common understanding of the requirements of regulatory acts in the use of renewable energy resources and energy construction in the territory of ...

# Solar glass house production in Latvia

Solar generation capacity is growing steadily, with a high number of microgenerator permits issued. Smart meter penetration is at 98%, but grid tariff increases in 2023 led to government ...

Building a solar factory in Latvia? Discover the best sourcing strategy. Compare EU vs. Asia suppliers on cost, logistics, and supply chain resilience.

Latvia's Energy Strategy 2050 outlines major changes in renewable energy production and storage, with significant investments planned in wind, solar, biomass, and biogas, as well as in ...
