

# Solar lights do not generate electricity after installation

Why do solar lights stop working?

The most common reasons why solar lights stop working are because of a dead battery, burnt-out bulb, lack of sunlight, bad switch, damaged wiring, or wrong timer setting. Solar lights are a great way to save energy and money while also adding some extra security to your home or property.

Why does my solar panel not receive sunlight?

The solar panel does not receive sunlight for a few reasons. One reason may be that the panels are dirty, which will prevent it from producing light or charging batteries.

How do you fix a solar light not working?

To fix solar lights not working, check and remove the battery pull tab, replace or deep charge the batteries, repair any damaged wiring, clean the solar panels, and ensure they're positioned in direct sunlight. [How Do You Reset a Solar Light?](#)

Why are my solar lamps not working?

If you've recently purchased solar lamps and they're not working, one common reason could be the presence of a pull tab on the battery. A pull tab is a small piece of insulator that is specially designed to prevent batteries and circuits from energizing -- protecting them during shipping and storage.
