

# The first leader in solar power generation

Solar power technology began in the 19th century with the photovoltaic effect discovery by French physicist Edmond Becquerel in 1839, ...

The world's first known solar collector, a device that collects solar radiation, was invented in 1767 and later used to cook food. Then, the late 1800s saw the ...

In 1839, Alexandre Edmond Becquerel discovered the photovoltaic effect, a pivotal moment that laid the foundation for modern solar energy. This ...

While no single individual can be credited with creating solar power outright, Alexandre Edmond Becquerel's discovery of the photovoltaic effect in 1839 laid the fundamental groundwork for ...

This effect was first observed by a German physicist, Heinrich Hertz. In his research, Hertz discovered that more power was created by ultraviolet light than ...

Decades after Becquerel's initial findings, an American inventor named Charles Fritts took the theoretical knowledge of the photovoltaic effect a step further. In 1883, he created what is ...

American inventor Charles Fritts was the first to take solar seriously as a source of large-scale generation. He hoped to ...

In 1973, the University of Delaware was responsible for ...

In 1973, the University of Delaware built the first solar-powered building, Solar One, using solar thermal and photovoltaic energy. In the 1980s, commercial concentrated solar power plants ...
