

The use of more natural and renewable energy

Clean energy has far more to recommend it than just being "green." The growing sector creates jobs, makes electric grids more resilient, expands energy access in developing countries, ...

The expansion of renewable energy is urgently needed to reduce carbon emissions, but it can entail some trade-offs with biodiversity.

In this article we look at the data on renewable energy technologies across the world; what share of energy they account for today, and how quickly this is changing.

For the 760 million people in the world who lack access to electricity, the introduction of modern clean energy solutions can enable vital services such as improved healthcare, better ...

What is renewable energy? Derived from natural resources that are abundant and continuously replenished, renewable energy is key to a safer, cleaner, and sustainable world. ...

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy), ...

Renewable energy, derived from naturally replenishing sources like the sun, wind, water, and geothermal heat, offers a transformative solution. Moving towards a renewable energy future is ...

Renewable energy--wind, solar, geothermal, hydroelectric, and biomass--provides substantial benefits for our health, our climate, and our economy.

In this paper, we examine the relationship between natural resources and renewable energy consumption. We employ robust econometric modelling on a large sample of 162 developed ...

In all, alternative energy use in the United States (the total use of both renewable sources and nuclear energy) has never topped 20 percent (the ...

In all, alternative energy use in the United States (the total use of both renewable sources and nuclear energy) has never topped 20 percent (the highest is 19.98 percent in 2017) of total ...
