

Transmission nodes use network cabinets with a depth of 600mm

How much N/cm² can a rack/cabinet support?

A point loading exerted by the base of the rack/cabinet on the floor shall not exceed 490 N/cm². Other values for point loading may be adopted by agreement between the supplier and customer. The rack/cabinet shall be able to support a static load of the superstructure with cabling, as described in Clause 7.

What is the 12U 600mm wide x 600mm deep PI data enclosure/cabinet?

The 12U 600mm Wide x 600mm Deep PI Data enclosure/cabinet has been designed to ensure maximum rigidity and weight loading without compromising the versatility of the solution. It can...

What are the coordination dimensions for a suite of racks/cabinets?

If additional equipment at the end(s) of a suite of racks/cabinets is required, the associated coordination dimensions shall be specified as an integer multiple of the mounting pitch of 25 mm for each side during equipment practice design and should be agreed between supplier and user.

Can racks/cabinets of different depths be used in the same line-up?

Racks/cabinets of different depths may be used in the same rack/cabinet line-up, but the fronts of all the racks/cabinets shall then be aligned, as illustrated in Annex A, figure A.2. Racks/cabinets with a depth of 300 mm shall be accessed only from the front, to allow them to be placed back-to-back or to the wall.
