

# What items are inspected during battery cabinet production

Why is a battery inspection important?

Multiple sources of potential contamination during battery production. Foreign materials, such as welding residue, excess anode or cathode material and flaked material, can cause electrical shorts, resulting in battery failure or worse, thermal runaway. Inspection helps ensure that batteries

Why is battery quality so important?

Poor battery quality can lead to major safety and reliability issues in the field in applications including consumer electronics [1,2], electric vehicles [3,4], aviation, and more. However, detecting latent cell defects --which are responsible for these battery quality issues--during production is notoriously challenging.

What are the three levels of battery manufacturing?

This applies to all three main levels of battery manufacturing: cells, modules and complete battery packs. "Overall equipment effectiveness" (OEE) is a tried-and-proven KPI for the efficiency of a production plant or line.
